About This Game

Have you ever imagined becoming a thief? Sneaking past countless guards inside a mansion? Traveling through secret passages, and stealing treasure inside?!

Nero's parents were killed when he was young. After watching a person being beaten by a nobleman, and thinking of his own parents' deaths, he is inspired to become the vigilante known as the "Moonlight Thief" and to serve the people, as their hero of justice.

The common people struggle to live without money. However, they have a strong resistance to persecution from the aristocrats. Why do nobles steal things from the people who don't have any more money? You have to infiltrate mansions owned by the nobles to return the items they've stolen to their rightful owners.

"Moonlight thief"

"Moonlight Thief" is a top-view action stealth mystery role-playing game. Nero, the "Moonlight Thief", helps the people who are struggling because of all of the nobles who oppressed them.

In a virtual village of the early 20th century, the nobles plunder the common people to benefit themselves. The Duke of Ewald then comes to the village, and his policies help the common people. However, before any significant changes, his health rapidly deteriorated, and the harassment from the nobility still remains unchanged.

Features

In the game, there are two categories: infiltrating into homes of the aristocrats, and finding clues about the death of Nero's parents. You will be following someone, tracking him/her down, and investigating the crime scene.

Most people are treated unfairly by the nobility but are afraid to fight against social order. To them, the Moonlight Thief is a hero.

There are many secret tunnels hidden in the nobility's mansion.

It's a game for Windows, and you can play it with a keyboard and mouse, Xbox 360, and PS4 DualShock.

BUGFIX. Big update!:

Dear community,
we have some bad news and some good news.

Let's start with the bad. Solstice Chronicles: Survivors is no more. We killed it, cut it to pieces and fed it to a pit of angry zombies we keep just for such occasions. But there are good news also, bear with us for a bit longer.

When we started working on the Solstice Chronicles: Survivors it was because the community asked for a multiplayer mode in the Solstice Chronicles: MIA and we were unable to provide that with the original game. It was supposed to be a standalone multiplayer game built upon the expanded MIA framework featuring more open gameplay similar to the survival mode.

Guided by our previous experience with the Unreal Engine and some great new talent we were lucky enough to acquire, we started peeling back layers of old code, improving old assets, playing with new gameplay elements, and the more we worked, the more we liked what we saw and more ambitious we got. But the more we worked, more often we got “wow, this is so The Red Solstice” moments.

The turning point happened when we started experimenting with the controls as we felt the pure twin stick scheme just did not feel right in a big open map. It felt somehow static and tiring and someone half jokingly suggested we try the The Red Solstice like RTS type controls. We actually tried it, and after a few days of intense discussions and multiple further rounds of testing we decided it was actually much better. It was then we finally said, “This is The Red Solstice 2!”.

So it is our great pleasure to officially announce that we are now working on a full fledged sequel called The Red Solstice 2: Survivors. It is a tactics oriented shooter game made for multiplayer squad tactics but fully playable in solo mode. Basically all that The Red Solstice offered, but improved by years of experience our team has gained, combined with the perks of a modern Unreal 4 engine.
